About Us

Oral and maxillofacial surgery requires additional years of hospital-based surgical and anesthesia training after dental school. As oral and maxillofacial surgeons, our doctors manage various problems relating to the mouth, teeth, and facial regions. Dr. Auerbach and all of our surgeons practice the full scope of oral and maxillofacial surgery with expertise ranging from dental implant surgery and wisdom tooth removal to corrective jaw surgery. They are specialists in rebuilding bone structure with minimal surgical intervention and optimal patient comfort. We also diagnose and treat facial pain, oral pathology, facial injuries, and fractures. The surgical staff at Riverside Oral Surgery are experienced oral and maxillofacial surgical assistants who assist in administering IV sedation and surgery in our state-of-the-art office setting. Patients are continuously monitored during and after surgery. All team members are informed and experienced personnel, well-versed in perioperative patient management, and are certified in cardiac life support.
